Work History

06-2021 -Current

DevOps Engineer
AdvancedMD, South Jordan - Remote

- Wrote code with Powershell & .NET Frameworks to reduce time spent working with Git to help automate and improve life within the team.
- Utilized what is now known as Cloud Bees & Azure DevOps to effectively roll out product releases.
- Integrated team work skills in order to effectively communicate and produce quality tools with and for foreign and domestic departments.
- Worked with several other departments such as the Quality Assurance department in order to improve workflow and successfully achieve release goals.

04-2021- 06/2021

Quality Assurance Engineer
AdvancedMD, South Jordan - Remote

- Used Postman to test funtions of the application and reduce bugs.
- Created Unit Tests to help automate and reduce bugs while verifying the integrity of our application.
- Wrote code in the C# .NET Core Framework to implement the Unit Testing.
- Utilized a form of Agile Scrum to effectively communicate and plan with other members of the company.
- Worked with AWS Workspace, and servers to help setup, and automate the creation of other environments.

01-2019- 03-2020

Fullstack Developer
Neybyte Software, Seattle - Remote

- Trained Customer Support Agents regarding company operations, policies, and services to insure a customer satisfaction guarantee.
- Worked heavily with Customer Support to fix bugs, resulting in a 40% reduction in customer complains.
- Used Java to create the core front end and back end of the application.
- Utilized JUnit to properly test and validate our software helping to eliminate any issues before product launch.
- Scripted with MySQL and other programming languages like python to help query databases and gather data relevant to users.

Education

12-2021

Bachelor of Science in Computer Science
Neumont College of Computer Science - Salt Lake City, UT
